**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-49, & 77-82, drawn to transmit test message by each of the bridging-devices, classified in class 370, subclass 241.
  - II. Claims 50-76, drawn to block ports to prevent formation of active loops in a network, classified in class 370, subclass 465.
  - III. Claims 80-88, drawn to a device of a local area network, classified in class 370, subclass 395.53.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I & II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because mention above. The subcombination has separate utility such as I-III.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, restriction for examination purposes as indicated is proper.

Art Unit: 2666

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
